Bridgwater Town Hall - Refurbishment Project
07. Glazed Atrium: A New Civic Welcome

Connolly Wellingham Architects

Proposed Atrium

- Capitalising upon the opportunity of the existing redundant lightwell.
- A new triple height space locating all vertical circulation in one place and drawing daylight into the centre of the site.
- A new lift and stair serving all adjacent floor levels across the formerly separate buildings and achieving level threshold access to almost all of the existing site.
- Install new doors to create an open flow from the Charter Hall and Auditorium through to the atrium with new refreshments servery.
- Walkways at upper levels connect north and south offices across the atrium, animating the space at high level and creating an orientation point for users on all floors.
- Adjacent rooftop extension resolves existing leaking roofs that are passed their lifespan.
- Create new plant deck for theatre ventilation equipment and air source heat pumps for low carbon heating.
- Connect into existing theatre attic space for installation and maintenance of new servicing.

Massing of roof extension
